

Galiso Master Gauge Assembly

The Master Gauge Assemblies are used for verification and calibration. A Master Gauge Assembly is used to calibrate the process gauge. This allows you to keep the Process gauge on the system and send out the Master Gauge annually to maintain NIST traceability.

All Galiso Master Gauge Assemblies are certified as having a quality rating (0.25%) of full-scale accuracy and include a Calibration Certificate.

The Analog Master Gauge Assembly features a mirror dial face and a fine pointer needle for increased accuracy and legibility.

- MGA-11 - 11,000psi Master Gauge Assembly P/N01-43-1113C
- MGA-6.6 - 6,600psi Master Gauge Assembly P/N 01-43-1112C
